

Leverage your existing infrastructure and IT assets such as desktops, VoIP phones, digital signage, etc., to effectively deliver reliable, timely notifications to everyone, everywhere.

The ability to send timely alerts to all endpoints, no matter their location at the push of a button is critical to saving lives.

Key Benefits of a Mass Notification System

COST SAVINGS

EFFICIENT

CUSTOMIZABLE

REAL-TIME REPORTING

In an emergency situation, **you need clear, calm, consistent communications.** You can do this by customizing your message templates or selecting specific delivery points through your MNS console. The ability to create preset custom alerts and messages eliminates human error in the event of an emergency.

The right MNS enables dispatchers to monitor alert delivery and acknowledgment during an event, which substantially increases the effectiveness, visibility, and integrity of your system.
